

DBB2

Explainable Basketball Intelligence for Professional Decision Makers

Available Basketball Intelligence Services

Projections	Historical Comparables	Player Archetypes	Offensive Profiles	Defensive Profiles
✓	✓	✓	✓	✓
FMV	SWV	Confidence Metrics	Monte Carlo Simulations	Neutralized Statistics
✓	✓	✓	✓	✓

The Challenge

Basketball organizations have access to more data than ever, but turning that data into trusted, actionable intelligence remains difficult. Traditional analytics produce scores or projections without explaining the reasoning behind them.

Three Core Differentiators

Explainability: Every output includes transparent reasoning. Why this player. Why this confidence level. No black-box recommendations.

Historical Comparables: Find the 12 most similar player-seasons from 30+ years of NBA history. Understand patterns. Make evidence-based decisions.

Basketball Intelligence: Not just stats. Understand player role, archetype, expected behavior, matchup implications, and risk profile.

What You Receive

- Historical player analogs with outcome distributions
- Player archetype classifications with behavioral profiles
- Percentile projections with confidence intervals
- Fair Market Value and proprietary valuation metrics
- Neutralized player statistics (team-independent)
- Offensive and defensive role profiles
- Risk metrics and probability distributions

Why DBB2

- Historical player analog engine (unique competitive advantage)
- Explainable AI framework (transparent, auditable, defensible)
- 30+ years of NBA historical data (foundation for all analysis)
- Monte Carlo simulation architecture (full probability distributions, not single estimates)
- Proprietary basketball metrics (FMV, SWV, neutralized statistics)
- Enterprise-ready integration (APIs, batch, custom)

Organizations We Support

Professional sports teams • Sportsbooks • Prediction markets • Fantasy platforms • Sports media • Analytics providers • AI sports applications • Research organizations

Flexible Integration

REST APIs • Batch data feeds • Enterprise integrations • Custom analytics services. Organizations may consume individual intelligence products or integrate multiple services.

Engagement Model

Phase 1: Discovery and evaluation using selected players and use cases.

Phase 2: Pilot integration and side-by-side evaluation within existing workflows.

Phase 3: Production deployment through enterprise APIs, batch delivery, or custom integration.
