

DBB2 for Sports Media

Power premium analysis with explainable player intelligence

The Challenge

Fans don't need more box scores. They need deeper analysis. Media outlets need differentiated storytelling that can be produced quickly.

Your competitive edge is compelling narratives, not faster stats reporting.

Right now, sports analysis is reactive. Player scores 30 points: 'Great game.' But your audience craves context. 'This is his 7th season playing this archetype. Historically, that correlates with peak performance in exactly this moment.' That's the story. That's what people share.

What DBB2 Provides

Historical Player Comparables

'This player resembles prime Chris Paul in these 5 ways.' Pull 10 similar player-seasons from 30+ years of history. Show their career arcs, peak performance windows, and how they aged.

Player Archetypes

Every player belongs to one of 54 offensive archetypes (or 26 defensive). Tells the story of 'what kind of player is this.' Facilitates instant comparison: Flagg entering his rookie season vs. other Point Guards entering their first year.

Performance Distributions

Not single predictions. Full probability distributions. 'Here's the range of realistic outcomes tonight, with confidence intervals based on historical precedent.'

Explainable Confidence

Every insight includes transparency. Why we're confident. How we arrived at the conclusion. Readers trust analysis grounded in evidence.

Fair Market Value (FMV)

How valuable is this player relative to market? Independent of salary cap, draft position, or hype. Useful for salary cap analysis, free agency, draft evaluations.

Content Applications

Pregame Analysis

"Here's what we know about [Player] entering tonight. Historically, players in this archetype against this matchup have these performance ranges."

Postgame Deep Dives

"Has anyone ever had a season like [Player]'s so far? Yes—here are the 8 closest comparables and how their seasons unfolded."

Draft Coverage

"Evaluating [Prospect]. Here's his archetype. He resembles these 5 college/early-career players. Here's how their NBA transitions went."

Trade Analysis

"What does this team actually get if they acquire [Player]? He's this archetype with this FMV. Historically, players like him contribute in these ways."

Free Agency & Salary Cap

"Market check: Is [Player] overpaid or underpaid relative to his Fair Market Value? Comparable deals from similar archetypes."

Broadcast Graphics

Real-time graphics showing player comparables and performance distributions. Enhances broadcast storytelling instantly.

Podcasts & Videos

"Today we're answering: What archetype is [Player] becoming? Here's the evidence." Data-driven discussion beats speculation.

AI-Assisted Editorial Research

Give writers DBB2 data as starting point. They add voice, narrative, fan context. Speeds up research cycle by 50%.

Why This Works for Sports Media

Unlike sportsbooks or prediction markets, you don't need to change operational workflows. You don't need engineers. You need better source material for storytelling. DBB2 provides that. Writers get historical ammunition. Producers get compelling graphics. Audiences get depth.

Pilot Evaluation

Scope: Power one editorial feature or content vertical (e.g., draft coverage, trade analysis, or a recurring postgame column) for 2–4 weeks.

What You Get:

- Full DBB2 data access via API
- Historical comparables for all 450+ NBA players
- Player archetype classifications
- FMV ratings and confidence metrics
- API documentation and editorial examples
- Support for integration into your editorial workflow

What We Measure:

- Engagement on DBB2-powered content (reads, shares, comments)
- Time required to produce content vs. baseline
- Writer/producer feedback (utility, reliability, accuracy)
- Audience reception (useful or gimmick?)

Data & Coverage

30+ years of NBA data. 10,000+ historical player-seasons analyzed. 450+ current NBA players. Quarterly methodology reviews. Real-time injury updates. Confidence scoring on all comparables (transparency on match quality).

How It Works

Option 1: Editor Dashboard

Web interface. Search any player, get historical comparables and archetypes instantly. Copy data into your CMS.

Option 2: REST API

Integrate directly into your editorial workflow. Pull comparables, archetype data, FMV on-demand as you write.

Option 3: Nightly Data Feed

All data delivered nightly. Load into your internal database. Query locally with zero latency.

Commercial Terms (Post-Pilot)

Fixed monthly license based on publication traffic/audience. Flat model. No revenue share. Transparent pricing. Details after pilot validation.
