

DBB2 for Sportsbooks

Player Intelligence for Sharper Props and Better User Engagement

The Challenge

Sportsbooks make money on player props. But props are also where sharp bettors exploit pricing inefficiencies. Without deep player research, you risk:

Mispriced props — Sharp bettors attack undervalued lines.

Low user confidence — Casual bettors want to understand player performance, not just guess.

Lack of differentiation — Your research tools don't stand out from competitors.

Hold % volatility — Without better inputs, player markets are unpredictable from a risk perspective.

What DBB2 Provides

Historical Player Comparables: For any NBA player, instantly retrieve 12+ similar player-seasons from 30+ years of history. Use historical context to inform pricing decisions.

Explainable Confidence: Every projection includes transparent reasoning. Sharp traders respect evidence-based analysis. Casual bettors feel more informed.

Probability Distributions: Full Monte Carlo distributions (not single predictions) for better understanding of outcome ranges. Useful for pricing and risk management.

Player Archetypes & Profiles: Understand player role, offensive usage, defensive impact. Adjust lines faster when lineups change or injuries occur.

Neutralized Statistics: Isolate player performance from team system. Helps with cross-sportsbook analysis and impact modeling.

Available Intelligence Products

Historical Comparables • Player Archetypes • Offensive Profiles • Defensive Profiles • Neutralized Statistics • FMV • SWV • Confidence Metrics • Monte Carlo Distributions • REST APIs

How This Supports Your Operations

Informed prop pricing: Provide additional basketball intelligence to support your initial player-prop pricing decisions.

Faster line adjustments: When lineups change or injuries hit, adjust quickly using player archetype context and historical patterns.

Research tools: Enable customer-facing research experiences, where appropriate, using historical comparables and explainable player intelligence.

Operational benefits: Potential benefits include improved pricing consistency, richer research tools, and better-informed trading workflows.

Competitive positioning: Most sportsbooks don't offer sophisticated player research capabilities. DBB2 gives you that option.

Pilot Proposal

Phase 1 (2 weeks): API sandbox access. Test DBB2 against your top 50 props (points, rebounds, assists) across next week's games. Evaluate: data quality, usefulness to your pricing team, relevance to your workflows.

Phase 2 (2 weeks): Staging integration. Run DBB2 intelligence live alongside your current process for actual games. Measure: integration effort, user engagement with research tools, operational impact.

Phase 3: Production deployment. Commercial terms (revenue share or flat licensing) based on pilot results and usage patterns.
