

StockArithm for Financial Media

Power audience engagement with explainable market context

The Challenge

Financial media covers what happened. Your readers want to know whether today's move has happened before, how often, and what historically followed.

Your audience doesn't need more news alerts. They need better context.

Traditional market coverage is reactive. 'Market up 2% on Fed comments.' That's basic reporting. Readers scroll past. What they crave: historical perspective that explains significance. 'This is the 47th time this dynamic has occurred. Here's what followed historically.'

What StockArithm Provides

Historical Market Analogs

For any market move (stock, ETF, sector), pull the 10 most similar historical patterns from 50+ years of data. Show probability distributions of what followed.

Pattern Recognition

Automatically identify when today's market dynamic matches a known historical pattern. Flag it for editorial consideration.

Explainable Context

Not black-box predictions. Show the reasoning: 'This resembles the 2018 VIX spike in these 4 ways. That pattern had these 3 historical outcomes.'

Probability-Based Scenarios

Full probability distributions, not single predictions. Show readers the range of possible next moves with historical confidence intervals.

API & Data Feeds

Integrate StockArithm intelligence directly into your publishing workflow. Power newsletters, dashboards, article generators, and interactive charts.

How Financial Media Uses This

Daily Market Stories

Morning editor checks StockArithm alerts. 'S&P matched a pattern from 2015.' That's the angle for the day's analysis piece. Readers get depth, not just what happened.

Earnings Coverage

When a stock moves big on earnings, pull historical comparables: 'In similar situations, the stock typically moves this range in the following week.' Adds credibility to your forecast.

Interactive Charts & Dashboards

Embed interactive historical analog comparisons. Readers see the current move, similar historical moves, and what followed. Engagement soars.

Newsletter Insights

Weekly digest: 'This week's market moves matched these 5 historical patterns.' Subscribers keep coming back for unique perspective.

AI-Assisted Article Generation

Drafting tool: Feed StockArithm historical context into your CMS. Generate article outlines with built-in credible sourcing.

Reader Engagement Features

Let readers explore their own questions: 'What happened the last time [stock] moved like this?' Custom dashboards, searchable analog library.

Why This Matters for Your Readers

Readers trust journalists who put events in historical context. 'Market up 2%' is noise. 'This is the 5th time this has happened. Here's what followed each time' is analysis. StockArithm gives you the historical ammunition. Your editorial voice makes it compelling.

Pilot Evaluation

Scope: Power one newsletter or one market section (e.g., commodities, crypto, earnings tracker) with StockArithm intelligence for 2–4 weeks.

What You Get:

- Daily historical analog alerts (via API or email)
- Access to StockArithm dashboard for editor research
- Integration support (API documentation, Slack support)
- Custom historical datasets if needed

What We Measure:

- Email open rates (pilot newsletter vs. baseline)
- Click-through rates on stories using StockArithm context
- Reader engagement on interactive dashboards
- Editor feedback (ease of use, relevance of analogs)

Data & Coverage

50+ years of market data. 10,000+ historical patterns analyzed. Covers: equities, ETFs, sectors, crypto, commodities. Real-time updates daily. Confidence scoring on all analogs (transparency on quality of matches).

Consumption Options

Option 1: Daily Email Alerts

StockArithm detects interesting patterns daily. Editor gets curated list of 'story angles' in the morning. Pick which ones to pursue.

Option 2: API Access

Integrate into your CMS or dashboard. Query historical analogs for any market move on-demand. Embed in articles or newsletters.

Option 3: Hybrid

Alerts for big moves + API access for deeper exploration.

Commercial Terms (Post-Pilot)

Fixed monthly license based on publication size and data usage. Flat model. No revenue share. Transparent, predictable pricing. Details after pilot validation.
