

DBB2 Partnership Brief for OpticOdds

Basketball Intelligence Platform: 10 Data Products Your Platform Doesn't Have

The Opportunity

Prediction markets are scaling. Basketball player props are among the fastest-growing markets. But market operators face a constant challenge: traders want research depth that current platforms don't provide.

DBB2 isn't just another projections tool. It's a basketball intelligence platform with 10 independently consumable data products that your team doesn't currently expose. Each one adds strategic value.

What You Get: 10 Basketball Intelligence Products

Historical Comparables: Find 12+ similar player-seasons from 30 years of history. Unique. Nobody else has this at scale.

Player Archetypes: 54 offensive + 26 defensive classifications. Every player fits a role pattern with historical precedent.

Offensive/Defensive Profiles: Detailed role analysis. Shot creation, usage, defensive impact—team-independent.

Neutralized Statistics: Player estimates isolated from system effects. What's the player vs. the system?

FMV & SWV Metrics: Proprietary player valuation models backed by 30+ years of salary and performance data.

Monte Carlo Distributions: Full outcome distributions (10k simulations per player). Not single predictions.

Explainable Confidence: Every output includes transparent reasoning. Why we're confident. Why we're not.

Traditional Projections: Standard stat forecasts as a commodity baseline.

Why This Matters for OpticOdds

You aggregate odds from sportsbooks. DBB2 provides the basketball intelligence that traders, researchers, and market makers actually want. Think of it as a data layer that makes your platform smarter.

For traders: Historical comparables + confidence metrics = justifiable positions

For researchers: Archetypes + neutralized stats = faster market analysis

For your platform: 10 data products your competitors don't have = competitive differentiation

For your customers: Content opportunities (comparables are stories), confidence in pricing, explainable outcomes

How DBB2 Complements OpticOdds

You have: market data, odds aggregation, trading infrastructure, customer connections.

We have: basketball intelligence—archetypes, comparables, valuation models, explainable confidence.

Together: The most complete basketball prediction platform. Your infrastructure + our intelligence.

Flexible Integration: Pick Your Model

Option 1 — REST APIs: Call DBB2 endpoints in real-time. Latency: ~200ms per player.

Option 2 — Batch Feeds: Nightly delivery of all 10 products for all NBA players. Query locally. Zero-latency access.

Option 3 — Hybrid (Recommended): Cache common lookups. API fallback for edge cases.

Option 4 — Custom Enterprise: Direct data connections or dedicated endpoints tailored to your architecture.

Pilot Proposal

Phase 1 (2 weeks): API sandbox. Access to all 10 data products. Test with 50 NBA players. Your team evaluates which products matter most to your use cases.

Phase 2 (2 weeks): Staging integration. Live data alongside your systems. Measure integration effort, trader/analyst feedback, and business impact.

Phase 3: Decision on production deployment and commercial terms.

Phase 1 & 2 Success Criteria

Phase 1: Integration is smooth. Data products are high quality and relevant. Your team sees value in 3+ of the 10 products.

Phase 2: Live integration works. Historical Comparables and Archetypes generate trader interest. Clear business case for at least one use case.
