

July 27, 2026

Abe,

Thank you for the thoughtful conversation about how DBB2 could fit into OpticOdds' infrastructure. I really appreciated your insights on how you think about player intelligence and market depth.

Here's where we landed: DBB2 isn't meant to replace your existing systems. It's designed to add an intelligence layer—one focused on explainable basketball player analysis. Our core idea is simple: as prediction markets scale, operators and traders need deeper reasoning behind player props and game outcomes. That's where we can help.

Specifically, we see DBB2 adding value in three areas:

- 1. Research acceleration:** When a new market opens, your team gets instant historical context (similar archetypes, performance ranges, historical precedents).
- 2. Trader confidence:** Explainable projections backed by 30+ years of basketball history help traders understand and trust pricing decisions.
- 3. Market depth:** Transparent intelligence makes participants more willing to take positions, which could increase liquidity (hypothesis to validate in the pilot).

I'm attaching a complete package:

- 1. Executive Summary** — 45-second overview of the proposal
- 2. Partnership Brief** — For your leadership team. The opportunity, what DBB2 does, the pilot proposal.
- 3. Technical Specification** — For your engineering team. Architecture, proposed API interface, integration options, and Phase 1/2 evaluation plan.
- 4. Roadmap Appendix** — We're also investing in complementary capabilities (Forkcast, prediction market intelligence). This document shows where we're headed as a company.

A few notes on the technical spec: The API endpoints and performance targets are proposals for the pilot. We want your feedback on whether this interface makes sense for your workflows. This isn't a finished product spec—it's an evaluation spec. If you want to pilot this, we'll refine it based on your actual needs.

We're ready to move fast. If this looks interesting to your team, we can start Phase 1 immediately.

Thanks again for the conversation. Looking forward to your feedback.
