

DBB2 B2B Executive Summary

Business-facing basketball intelligence for sportsbooks, prediction markets, media, and platform partners

The Opportunity

- B2B buyers need basketball intelligence that can power pricing, content, trading, and customer-facing products.
- Raw stats are not enough. Teams need explainable outputs they can trust, audit, and commercialize.

What DBB2 Delivers

- Historical comparables and player archetypes for deeper basketball context.
- Neutralized statistics, FMV and SWV metrics, confidence outputs, REST APIs, batch feeds, and custom integrations.

Why It Matters

- Shortens analyst workflows, creates differentiated product features, and supports explainable decisioning for traders and researchers.
- Turns basketball intelligence into something a business can ship, price, and support.

Best-Fit Buyers

- Sportsbooks and pricing teams, prediction market operators, sports media, fantasy products, and analytics platforms.
- Any organization that needs a stronger basketball data layer than commodity projections alone.

Engagement Model

- Phase 1: discovery with selected use cases.
- Phase 2: pilot integration and side-by-side evaluation.
- Phase 3: production deployment through API or batch delivery.
