

StockArithm B2B Executive Summary

Explainable market intelligence for research teams, publishers, and platform partners

The Opportunity

- Financial organizations need transparent market intelligence that can be embedded into products and workflows.
- Black-box predictions are hard to trust, hard to explain, and hard to sell inside a business environment.

What StockArithm Delivers

- Historical market comparisons, sector intelligence, explainable analysis, alternative data integration, and enterprise APIs.
- A research layer that helps teams identify, understand, and validate opportunities instead of guessing at them.

Why It Matters

- Improves analyst productivity, creates differentiated content and customer experiences, and adds transparency to AI-powered investing tools.
- Gives commercial teams a market-intelligence product they can actually defend to users and stakeholders.

Best-Fit Buyers

- Investment firms, asset managers, financial media, research providers, alternative data companies, and AI investing platforms.
- Any business that wants explainable market context instead of opaque signal generation.

Engagement Model

- Phase 1: research sandbox with selected securities.
- Phase 2: workflow evaluation and pilot integration.
- Phase 3: production deployment and commercial terms.
